Globe Valves Actuators with Electronic Fail Safe Function

MODEL	FORCE [N]	POWER SUPPLY	DESCRIPTION
MVE206R	600	230Vac±10%	long yoke, modulating/ floating control with position emergency return with totally open or closed valve selectable through jumper
MVE206SR	600	230Vac±10%	short yoke, modulating/ floating control with position emergency return with totally open or closed valve selectable through jumper

MVE2xx

OPERATION

APPLICATION AND USE

MVER is a flexible electro-mechanical actuator equipped with electronic fail safe function device for the control of two-way and three-way globe valves in:

- Heating and cooling systems;
- Air Handling Units;
- District heating plants;
- Industrial temperature control systems.

The actuator is endowed with an electronic emergency return function which operates through the use of ultracapacitors whose life is about 10 years if the actuator operates within the operation limits declared in this data sheet.

The emergency position (retracted or extended stem) is set through the use of a jumper which can be easily reached (look at paragraph "DIP switches and jumper settings").

The actuator is supplied with totally discharged ultracapacitors and at its first start a pre-charge phase of about 130s will be necessary.

During this phase all the functions of the actuator are inhibited and the charge status of the ultracapacitors is signalled through 2 LEDs (look at paragraph "Standard LEDs").

MVER can be controlled either by a proportional (modulating) signal or by an increase/decrease (floating) signal.

It is easy to mount and connect the actuator. Direct mounting is possible to any CONTROLLI flanged valve. Linkage kits are available for CONTROLLI threaded valves as well as for valves of other manufacturers. The actuator has a fine resolution (500 steps on the full stroke range) for accurate fluid control and it is able to self-calibrate on a different stroke without the need of any user action (this function is DIP switch selectable on the field).

MVER has intelligent behavior and alarm functionality in case of unexpected operation, feedback of alarms to the user is provided by LEDs (GREEN and RED) on the upper control board.

N.B.: do not use the actuator if not coupled with its relating valve.

The actuator is endowed with an electronic fail safe function which, in case of power failure, allows to close (or to open) the valve and to go back to the set position through the jumper.

The actuator commutes the control signal (modulating or 3-point floating) from the controller into a valve position. A modern brushless DC motor in the actuator drives a gear train and a worm gear – screw jack mechanism convert the motor revolutions into accurate and repeatable linear movements.

Control Signal

MVER can be controlled by one of 2 main control types.

- 3-point floating ;
- Modulating (or proportional) signal with filed selectable range (e.g., 0-10Vdc, 2-10Vdc, 0-5/2-6Vdc, 5-10/6-10Vdc and 4-20mA).

Manual Override

There is a manual operation handle on the actuator. When it is lowered (manual override ON), the power supply to the motor power stage circuitry is cut and the motor stops. The actuator can be operated manually and the valve positioned accordingly.

The manual override lever stays in position until it is raised again, then board and motor will be powered again. At the end of this operation, the actuator moves to initial position (on the basis of DIP n. 1 setting), then it follows the control signal. When the manual override is engaged the GREEN and the RED LED on the lower electronic board are ON.

Manual operation handle can also be used to modify any DIP switch setting or as re-set function after any alarm occurrence.

The actuator is supplied with the manual override lowered (ON). It is not necessary to remove power supply to modify DIP switches setting.

Controlli S.p.A. 16010 Sant'Olcese (GE) Tel. 010 73 06 1 Fax. 010 73 06 870/871 www.controlli.eu

Position Feedback

MVER utilizes a 2-10V position feedback (look at DIP n. 1 settings).

Calibration

MVER ha both Auto and Manual Stroke Claibration. Actuator is delivered with DIP n. 7 set to Auto. Manual calibration is not necessary unless maintenance is required on the valve or certain alarm functions are desired.

End Point Auxiliary Switches (with accessory DMVE)

End point switches change over when the valve is fully open or closed. They are free contacts with 24Vac max voltage on terminals. End point switches can be utilized to indicate valve stroke end positions and for relay control of additional plant equipment. When the actuators are controlled individually or in sequence, it is possible to use the end switches to toggle when the valve is fully open or fully closed. The auxiliary switch position according to control signal (Y) is shown in the picture below.

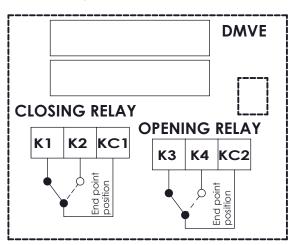

CONTROL SIGNAL (Y)	RELAY KC1	RELAY KC2
0-0,5V	KC1 to K2	KC2 to K3
0,5-9,5V	KC1 to K1	KC2 to K3
9,5-10V	KC1 to K1	KC2 to K4

Diagnostic

The actuator is provided with a self diagnostic algorithm able to detect faulty conditions:

- stroke out of range 5-60mm;
- unexpected stall condition (e.g., valve stuck);
- missing expected stall condition (e.g., link loose);
- voltage supply out of range.

These faulty conditions are signalled via the GREEN and RED LED on the lower electronic board blinking accordingly (see "Diagnostic – Alarm Function Table").

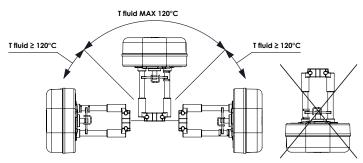

TECHNICAL FEATURES

	MVE206R/SR	
Alimentazione F N	230Vac ±10%, 50-60Hz	
Power consumption (running)	13VA/6W	
Power consumption (Holding)	11VA/5W	
Charging phase consumption	32VA/18W	
Ultracapacitors charging phase (if totally discharged)	300s	
Running and emergengy return time		
Modulating 5-14,9mm	15s	
Modulating 15-24,9mm	20s	
Modulating 25-39,9mm	25s	
Modulating 40-60mm	30s	
Floating	60s	
Transformer Size [VA]	50	
Stroke	5-60mm	
Force	600N	
Duty cycle	max 50%/60 minutes	
Analog input Y M	Voltage 0-10V - impedance > 100kΩ (range: 0-10 2-10 0-5/2-6 5-10/6-10) 500Ω (range 4-20mA)	
Digital inputs Y1-Y2	Connection of Y1, Y2 to M	
	Voltage 16Vdc ± 0,5V	
Output V+	Max Load 25mA,	
	Voltage 2-10Vdc (0-100%)	
Output U	Max Load 2mA	
Number of cycles of emergency	1.000	
Type of movement	linear	
Ambient temperature	Operation and storage -10/+50°C	
Ambient Humidity	max 90% RH	
Protection degree	IP54	
Insulation class		
Standard	Emission/Immunity EMC 2004/108/CE according to EN 61326-1:2006 standard	
Material	Housing: Aluminum - Cover: ABS plastic	
Color	Aluminum / White	
Weight [kg]	1.5	
Dimensions [mm]	Refer to the picture on page 7	

The actuator can be mounted with any orientation but never up-side down. When the fluid temperature exceeds 120°C the actuator shall be mounted leaning 45°.

To mount the actuator on to a valve, position the valve stem to the bottom of its travel, slide the actuator onto the valve neck, adjusting with the manual override the screw jack position so the square nut on the valve spindle fits into the groove on the cross bar. Then slide the brace into the groove on the valve neck and secure the nuts.

See mounting instructions for full details (MVE2xxR_DIM266).

MAINTENANCE

The actuator is maintenance free.

ACCESSORIES

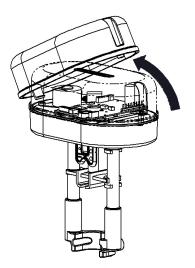

- **DMVE** Endpoint auxiliary switches
- **248** Yoke heater 24Vac, 50W (suggested when the fluid temperature is below 0°C)

ELECTRIC CONNECTIONS

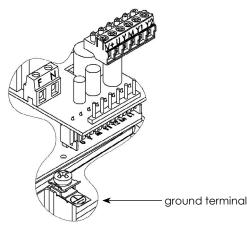

Remove the cover screw with a screwdriver and then remove the cover as shown in the picture below.

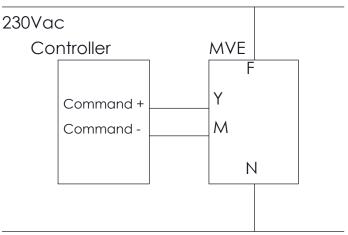

The actuator is equipped with a 6 poles removable terminal block; each pole of the plug is clearly marked and the same label are reported on the electronic board. Before powering up the actuator make sure the plug is properly connected to the board and the label on the plugs and on the board match.

Connect the ground terminal to the proper screw labelled with the ground symbol as shown in the picture here below.

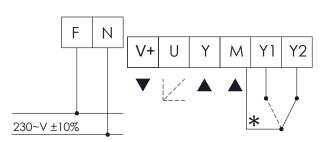

Neutral

SAFETY PERSCRIPTIONS

230 V products

- 1. Install on the power supply line a protecting device to avoid short circuits (fuse or magneto-thermic) according to the specifications in force.
- 2. In case of accidental removal of the cover to make sure that power is disconnected before working on the actuator or near it.
- 3. The products are maintenance free.

TERMINAL BLOCK

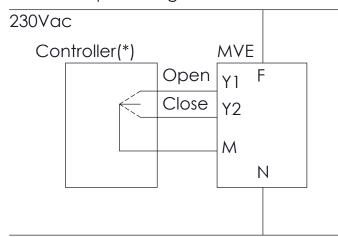

(*) In order to use the floating control the only possible connection is between terminal M and Y1/Y2. Do not connect Y1/Y2 to phase (F) or neutral (N).

Use cable gland PG13,5 model (not supplied).

LABEL	DESCRIPTION	FUNCTION	MIN WIRE SIZE	MAX WIRE LENGTH

3p Floating Control

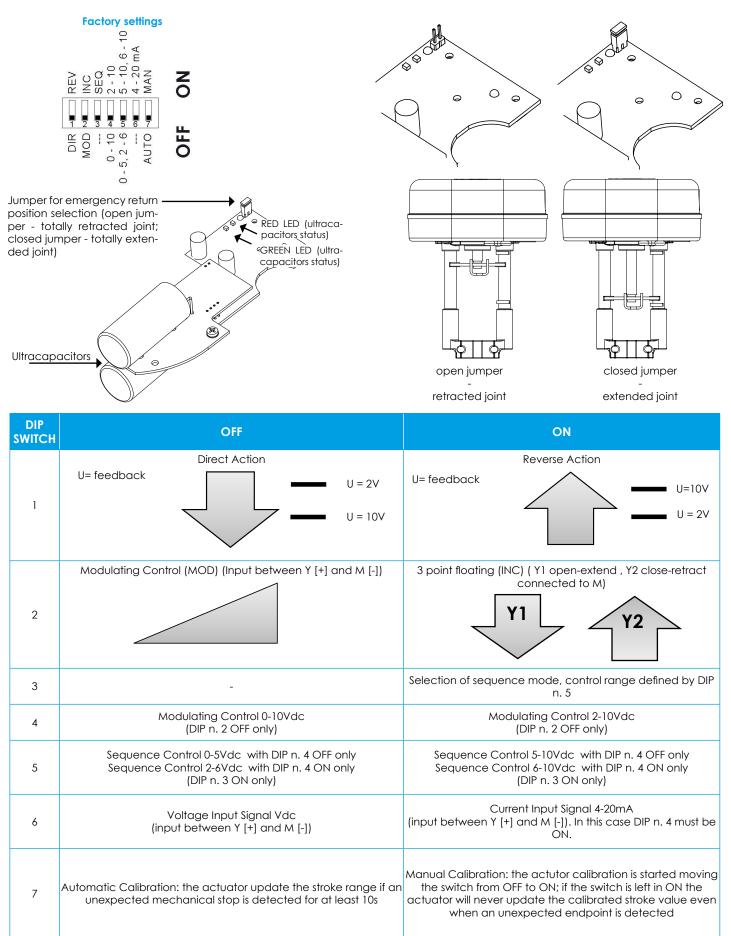

Neutral

(*) MVE contain a half-wave rectifier power supply. They must not be powered with transformers that are used to power other devices using not isolated full-wave rectifier power supply.

Set the DIP switches according to the tables here below. In order to be sure that any modification has been accepted by the actuator, power down and power it up again or act on the manual operation handle.

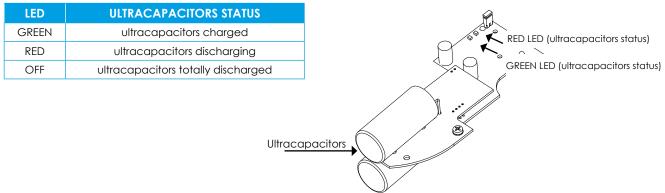

N°	LED	ERROR	WHEN	ACTUATOR BEHAVIOUR		TYPICAL TROUBLE SHOOTING CONDITION	RESET PROCE- DURE
				Automatic Calibration SW7 OFF	Manual Calibration SW7 ON		
1	RED ON	Calibrat- ed stroke valve less than 5 mm	Calibration / first installation	The actuator push/pull 5 times (unexpected stall) trying to remove the possible obstacle. After 5 try alarm is signaled (RED Led ON) and the actua- tor moves to initial position and does not respond to control signal. Stroke value is not up- dated beacuse out of range	The actuator push/pull 2 times against endpoint during calibration. Alarm is signaled (RED led On) and the actuator moves to the initial position and then it does not reposnd to the control signal.	Valve with a stroke lenght lower than 5 mm	Remove power and repeat calibra- tion
2	RED ON	Stroke lon- ger than 60 mm	Calibration / first installation	The actuator exits the 60 mm stroke range and it moves toward the new stroke limit signaling an anomaly (RED led on). Tha actuator does not calibrate the stroke	The actuator push/pull 2 times against endpoint during calibration. Alarm is signaled (RED led On) and the actuator moves to the initial position and then it does not reposnd to the control signal.	Valve with a stroke lenght longer than 60 mm	Remove power and repeat calibra- tion
3	RED Quick Blinking + GREEN ON	Unexpect- ed stall within the calibrat- ed stroke range	normal oper- ation	The actuator trys 5 times against the new stall condi- tion and then after 10 second the actuator update the new stroke lenght	The actuator trys 5 times against the new stall con- dition and then after 10 second the actuator does not update the new stroke lenght	Valve stuck	Inverted control signal
4	RED Quick Blinking + GREEN ON	Stroke lon- ger than expected	normal oper- ation	The actuator moves toward the new stall condition with a lower speed; after 10 second the actuator update the new stroke value	The actuator moves toward the new stall condition with a lower speed; after 10 second the actuator does not update the new stroke value	stem con- nection loose or valve damaged	Inverted control signal
5	RED slow Blinking	Low Power Voltage	normal oper- ation	The actuator still working but performance cannot be guar-	The actuator still working but performance cannot be	1. Wrong transormer size	Correct Voltage
	DIII KII IG	vondge		anteed	guaranteed	2. unstable power	Power
